        .btn {
            display: inline-block;
```

## Fitness Center — Website Output

### Technologies Used

**HTML:** creates the page structure, headings, navigation, sections, and forms.

**CSS:** styles the page with colors, spacing, buttons, cards, and responsive layouts.

### Main Features

- Home section with a welcome message and call to action.
- Workout program cards for strength, cardio, and fitness classes.
- Trainer profiles and membership plan details.
- Facilities and schedule information.
- Registration or contact form layout.

### Expected Outcome

The completed website acts as an online information page for a gym. Visitors can review available programs and plans before contacting the fitness center. A real registration system would require backend processing or a form service; a static HTML page alone does not store submissions.

## Tourism and Heritage — Website Output

- Offer practical travel tips for visitors.

### Technologies Used

**HTML:** organizes destination descriptions, galleries, lists, and navigation links.

**CSS:** provides image layouts, destination cards, typography, colors, and mobile-friendly presentation.

### Main Features

- Destination cards with short descriptions.
- Heritage monument and cultural festival sections.
- Local cuisine highlights.
- Travel tips and visitor information.
- Image gallery organized by region or attraction.

### Expected Outcome

The website serves as a simple digital guide for people interested in travel and heritage. It makes destination information easier to explore and can be extended with maps, booking links, or verified travel updates.

## Tourism and Heritage — Website Output

- Offer practical travel tips for visitors.

### Technologies Used

**HTML:** organizes destination descriptions, galleries, lists, and navigation links.

**CSS:** provides image layouts, destination cards, typography, colors, and mobile-friendly presentation.

### Main Features

- Destination cards with short descriptions.
- Heritage monument and cultural festival sections.
- Local cuisine highlights.
- Travel tips and visitor information.
- Image gallery organized by region or attraction.

### Expected Outcome

The website serves as a simple digital guide for people interested in travel and heritage. It makes destination information easier to explore and can be extended with maps, booking links, or verified travel updates.

## Movie Review — Website Output

### Technologies Used

**HTML:** structures movie cards, headings, lists, and review sections.

**CSS:** styles posters, rating labels, genre tags, spacing, and responsive grids.

### Main Features

- Movie poster cards with title and release date.
- Genre categories and cast information.
- Synopsis and review sections.
- Rating display for each movie.
- Navigation to browse different groups of movies.

### Expected Outcome

The website provides a convenient overview of movie details and reviews. In a static prototype, ratings and reviews are sample content; live ratings, search, and user-submitted reviews would require data storage or an external service.

```

## Movie Review — Website Output

### Technologies Used

**HTML:** structures movie cards, headings, lists, and review sections.

**CSS:** styles posters, rating labels, genre tags, spacing, and responsive grids.

### Main Features

- Movie poster cards with title and release date.
- Genre categories and cast information.
- Synopsis and review sections.
- Rating display for each movie.
- Navigation to browse different groups of movies.

### Expected Outcome

The website provides a convenient overview of movie details and reviews. In a static prototype, ratings and reviews are sample content; live ratings, search, and user-submitted reviews would require data storage or an external service.
